Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2585 CAGACCAATTTATGCCTACAGCCTCCTAGTACAAAGACCTTTAACCTAATCTCCTCCCCC 2526
Sequence 1, Application US/08799569
Patent No. 6133244
GENERAL INPORMATION:
APPLICANT: Marchel, Maryline
APPLICANT: Mancine, Maryline
TITLE OF INVENTION: Oucleotide Vector, Composition
TITLE OF INVENTION: Concaining Such Vector, and Vaccine for Immunization
TITLE OF INVENTION: Against Hepatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CAGGCCAAATGTTGCCTTTGGGGGTTCCTGTTTCAACAGCATGGTGTGAAGCGCCGCATCA 81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2525 Aachecheceagieithaaacaanchirtaaagrahageereaagice 2475

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-146-072A-1/c

Sequence 1, Application US/09146072A

Patent No. 6635624

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Whalen, Robert G.

APPLICANT: Whalen, Robert G.

TITLE OF INVENTION: UNCLECTIOE VECTOR, COMPOSITION CONTAINING SUCH VECTOR AND VACCINE

TITLE OF INVENTION: FOR IMMUNIZATION AGAINST HERATITIS

FILE REFERENCE: C01040.70004.US

CURRENT APPLICATION NUMBER: US/09/146,072A
Mancine, Maryline
TITLE OF INVENTION: Nucleotide Vector, Composition
Containing Such Vector, and Vaccine for Immunization
Against Hepatitis

Sequence 1, Application US/08916421B
Patent No. 6503729
GENERAL INFORMATION:
TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanococ
Patent No. 6503729
TITLE OF INVENTION: januaschii
FILE REFERENCE: P8275
CURRENT APPLICATION NUMBER: US/08/916,421B
CURRENT PILING DATE: 1997-08-22
PRIOR FILING DATE: 1996-08-22
                                                                            .

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone amen. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one Mil subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em; EMBL; Sw;
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
droup.
                                                                                                                        Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
1 (bases 1 to 160115)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         http://www.sanger.ac.uk/HGP/Chip

It currently consists of 85 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                          Direct Submission

L Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 13, 2003 this sequence version replaced gi:24942245.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

Baylor Plaza, Houston, TX 77030, USA
On May 13, 2003 this sequence version replaced gi:23123542.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hggsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a "working draft" sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NatC
N(alpha)-terminal acetyltransferases contains MaklOp,
Maklip and MakJa subunits. All three subunits are
associated with each other to form the active complex"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bmail: cgapbs-r@mail.nih.gov

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        / Loudy

This is a long-transcript enriched cDNA library (Genome Res. II: 153-1558 (2001). [PMID: 11544199] from WAO1 cell line. Undifferentiated human ES cell line WAO1 cell line. Undifferentiated human ES cell line WAO1/HI was obtained from WiCell Research Institute, Inc., Madison, Wi, oultured according to their instructions, on MEF feeders. They formed coroning to their instructions, on MEF feeders. They formed colonies with defined edges and were positive for alkaline phosphatase, SSEA-4, OCT3, OCT4, REX1, UTF, TERT, SOX2, CX43 and CX45. They are negative for GATA2, GATA4, PDX1, NCAM, MSX1, FLT3, SSEA-1, TUBB3, NES, GFAP, and EDMSE. When confluent (18-10 days after plating), the ES cells from 4 X 6cm dishes were treated with 1 mg/ml collagenase, type IV (Invitrogen/GIECO) for 5-10 min and gently scraped off with 5 ml pipette. RNA was purified with TRI20l Reagent from Invitrogen. Protocol ref: Genome Res. 11: 1553-1558 (2001). [PMID:11544199]) bouble-stranded cDNAS were synthesized with an Oligo(dT) primer [Invitrogen:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to Lone-linker Li-Sal4, purified by phenol/chloroform extraction, and separated from free linkers by Centricon-100 column. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S for 25 cycles. The products were purified by phenol/chloroform extraction and centricon-100 column. The cDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of pCWV-SPORT6 plasmid vector. The average insert size is about 3.6kb."

Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwMp42 (gi|4732114|gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli Xni0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BF179099 974 bp mRNA linear EST 31-OCT-2000 601808136F1 NCI_CGAP_Mam5 Mus musculus cDNA clone IMAGE:4038945 5',

New lung specific nucleic acid useful in gene therapy or as vaccines for treating lung cancer (e.g. squamous cell carcinoma) or non-cancerous lung diseases, as well as for diagnosing, monitoring or staging these diseases.

Claim 1; Page 168; 282pp; English.

The present invention describes an isolated lung specific nucleic acid (LSNA) comprising a sequence that: (a) encodes any of the 93 amino acid sequences comprising 17 - 73 amino acids, given in ABB25873 to ABB25965; (b) comprises any of 115 sequences comprising 148 - 3193 base pairs (bp), given in ABQ75262 to ABQ75376; (c) selectively hybridises to (a) or (b); or (d) has 60 % sequence identity to (a) or (b). LSNA and lung specific protein (LSP) sequences have cytostatic activity and can be used in gene therapy and vaccines. LSNAs and LSPs are useful for diagnosing and monitoring the presence and metastasses of lung cancer in a patient. An

```
antibody that specifically binds to an LSP can be used for determining the presence of an LSP in a sample, as well as for treating a patient with lung cancer, particularly by inducing an immune response against the lung cancer cell expressing the LSNAs or LSPs. In particular, these LSNAs and LSPs are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer (e.g. squamous cell carcinoma) and non-cancerous disease states in lung
